MEDICAL DIRECTOR
James F. Kravec
MD, FACP

Dear Mahoning County residents,

I am very pleased to present the 2021 Mahoning County Public Health Annual Report. Recent events during the past years have tested the programs and policies developed by Mahoning County Public Health. Through the outstanding work that continues to be delivered by MCPH staff, our systems have been found to be resilient and adaptable to meet the demands of a global public health emergency. As 2020 was coming to an end, public health and healthcare professions were eagerly preparing to shift the course of the pandemic through vaccination efforts. The Mahoning County Public Health Vaccine Taskforce was established, with support from the Mahoning County Emergency Management Agency and other community partners, to identify a location to safely administer and streamline vaccination efforts. We owe thanks to the Austintown Township Trustees and the Austintown Senior Center staff for allowing MCPH to transform their space into a fully functional vaccination site and scheduling center. The Austintown Senior Center served as our vaccine clinic hub until April of 2021. I am proud of our team for leading the vaccine rollout in Mahoning County and for bringing together our departmental staff and numerous agencies across government to administer 400-500 vaccinations per clinic day based on eligibility requirements set forth by the Ohio Department of Health and available vaccine.

In April and May 2021, Mahoning County Public Health increased vaccination efforts by introducing a regional mass vaccination site at the former Dillard's department store at the Southern Park Mall. A larger facility was needed due to expanded vaccine eligibility requirements and increased vaccine procurement from the state. The mass vaccination site was operational on Fridays and Saturdays to accommodate working individuals and had the capacity to vaccinate 5,000 patients each week.

Additional vaccine opportunities in conjunction with the MCPH standing clinics included the following:

- Onsite clinics located in low economic senior housing developments with the assistance of Direction Home of Eastern Ohio and the Ohio National Guard
- School-based clinics in conjunction with Mercy Health staff for ages 16 and older
- Latinx community clinics in conjunction with Mercy Health
- Onsite clinics at local businesses for employees
- Popup clinics for identified low vaccine rate areas as derived from data (City of Campbell and Village of Sebring)
- At-home vaccinations opportunities for clients who are clinically defined as homebound
- Onsite vaccination clinics during the Canfield Fair

As the 2021 focus was to transform the pandemic while protecting our citizens through vaccination efforts, it is recognized that our work could not be achieved without having dedicated staff and community partners who joined our efforts. It is for this reason I would like to thank the entire MCPH staff who have dedicated long hours and sacrificed nights and weekends to protect our citizens. In addition, I would like to recognize the following community partners who joined our efforts:

- Board of Mahoning County Commissioners
- ArmorVax
- Boardman Township Officials
- Akron Children's Hospital
- Cafaro Company
- Direction Home of Eastern Ohio
- Mahoning County Educational Service Center
- Mahoning County Emergency Management Agency
- Mahoning County Sheriff's Department
- Tracy McNally Janitorial Services
- Mercy Health
- Piper's Printing Company
- Sam's Club
- Southern Park Mall
- Southwoods Health
- Walmart
- WRTA

Respectfully,
Ryan Tekac, MPH, MS, REHS

Operation and Maintenance Program Development

In 2015, the Ohio Revised (ORC) and Administrative Code (OAC) were updated to include language related to the operation and maintenance (O&M) of septic systems throughout the state. The revised language put the responsibility for developing and maintaining an O&M program onto each local health department. Few guidelines were provided by the state in relation to the details or funding of this program, apart from the guidance that all Household Sewage Treatment Systems (HSTS) must be enrolled in an O&M program by 2025 and that the state would not be providing funding for O&M activities, so any program developed must be supported by localized funding sources.

Mahoning County currently has between 16,000 and 17,000 HSTS that our agency is aware of. If certain system types were altered or changed after 2015, the HSTS was pulled into an O&M program in the county. This method of slowly enrolling systems has placed over a thousand systems into our O&M program between 2015 and 2021. However, to remain compliant with the ORC and OAC, the remaining systems in our county need to also be enrolled in the program.

Starting in 2019, MCPH Environmental Health Sewage Sanitarians began planning and researching for this all-encompassing rollout of the O&M program. This research also involved reaching out to neighboring counties and learning about their O&M programs and policies. Throughout the 2021 year, the MCPH O&M team worked extensively to compile the data and finalize a program that was fair and equitable to the citizens of our county.

Given the years of hard work and dedication that this program took to develop, it is no surprise that MCPH Environmental Health staff proudly announced the finalization of the O&M program and presented it to both the Board of Health and the community through education and outreach in 2021.

Interagency COVID Response and Collaboration

Mahoning County Public Health (MCPH) was instrumental in reacting to COVID-19 and its associated variants. In the early months of 2021, MCPH saw the release of the long awaited COVID-19 vaccines. While the vaccine was available, the distribution and administration of the shot was a feat that would require extensive planning and countless manhours on the ground. Many MCPH divisions stepped up to help out where they could and the Environmental Division (EH) dedicated their time and effort to do their part in the fight against COVID-19.

Staff from MCPH Environmental Health filled in at nearly every position during the COVID-19 response, from assisting with the planning and coordination of the mass clinic sites, to the scheduling and registration of citizens around the county. The Environmental staff worked as Security and Safety Officers in the Incident Command Structure (ICS), logistics coordination and data entry, all while maintaining the basic and required functions of our division. Whether working at the clinics or maintaining our services in the office, the MCPH Environmental Health division went above and beyond their normal duties to ensure the public's health continues to be protected.

Groundwater Monitoring Program

The Mahoning County Public Health Groundwater Monitoring Program has been an on-going program since 1993. The Laboratory Services Division of MCPH collects homeowner well water samples for citizens living within a one-mile radius of one of the county's active or inactive landfills.

The program has its roots in the mid to late 1980s, when the county started seeing an increase in waste, especially from out-of-state locations, which caused concern from citizens on how waste was being handled.

Landfills were unprepared to handle increases, and this prompted the State of Ohio to pass House Bill 592 in 1988. This bill added and enhanced regulations for solid waste and resulted in the first Mahoning County Host Agreement in 1991 between Mahoning County Public Health, Carbon Limestone Landfill, Poland Township, and the Mahoning County Solid Waste Management District.

The Host Agreement established the program to test homeowner drinking water wells around the landfills. It provides a comfort level to citizens that their water is being monitored and protected.

Mahoning County Public Health currently collects 218 samples annually around Mahoning County's seven active and inactive landfills. The testing consists of 48 parameters ranging from inorganic compounds, heavy metals, volatile organics, and bacteria.

This program assures citizens that groundwater quality is being monitored around our landfills, and that their local health department is concerned and protecting their drinking water.

Protecting the Health of Low-income Women, Infants, and Children

The Mahoning County WIC Program is funded by the United States Department of Agriculture to provide nutrition education, breastfeeding support, and nutritious foods to promote good health for low-income pregnant, post-partum and breastfeeding women, infants and children up to age 5. Mahoning County WIC currently serves 3,315 clients (736 pregnant, post-partum, or breastfeeding women, 772 infants, and 1,807 children). Mahoning County WIC has four clinic sites located in Goshen, Boardman, and Austintown Townships, and in the city of Youngstown.

In 2021, 44% of WIC participants were breastfeeding their infants. To enhance awareness on the numerous health benefits of breastfeeding for both parent and child, WIC participated in Breastfeeding Awareness Month (BAM) in August. The 2021 BAM theme, "Protect Breastfeeding: A Shared Responsibility", focused on how breastfeeding contributes to the survival, health and well-being of all and the obligation to protect breastfeeding worldwide. The Mahoning County WIC Program

was well received and was enhanced with a speaker and vendors from managed care, local social service agencies, and healthcare professionals. The bonus event of the afternoon was the Breastfeeding Awareness T-shirt contest—where WIC participants supported breastfeeding through their creative designs placed on t-shirts.

The Mahoning County WIC Program also supports the Farmers Market Nutrition Program (FMNP), which provides benefits to both WIC participants and the local community. WIC participants have an opportunity to improve their health by eating more nutritious fresh fruits and vegetables. The community benefits by the establishment of farmers' markets in areas lacking access to fresh produce and provides income to farmers that in turn helps boost the local economy. Mahoning County WIC distributed over 725 vouchers for the FMNP in 2021. Each voucher provided WIC families \$20 to shop at local farmers' markets to purchase fresh fruits and vegetables. Mahoning County WIC partnered with ACTION and Grow Urban Farms to provide "Pop-Up" Markets in the parking lots of several of the WIC clinic sites to offer the families an opportunity to redeem their vouchers and take-home fresh fruits and vegetables to help their families eat healthier. Mahoning County WIC's redemption rate for FMNP vouchers was 55%, an increase from 2020.

The Mahoning County WIC Program continues to work in many venues within the local community to promote positive pregnancy outcomes, support breastfeeding, monitor the growth and development of infants and children, and inform families of their options for healthier lifestyle changes.

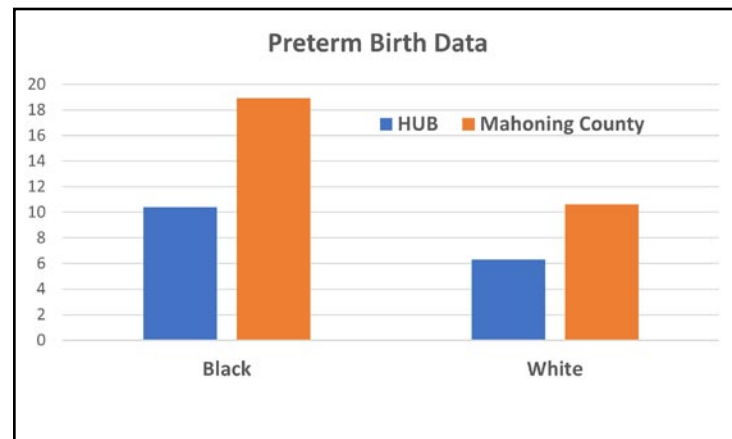

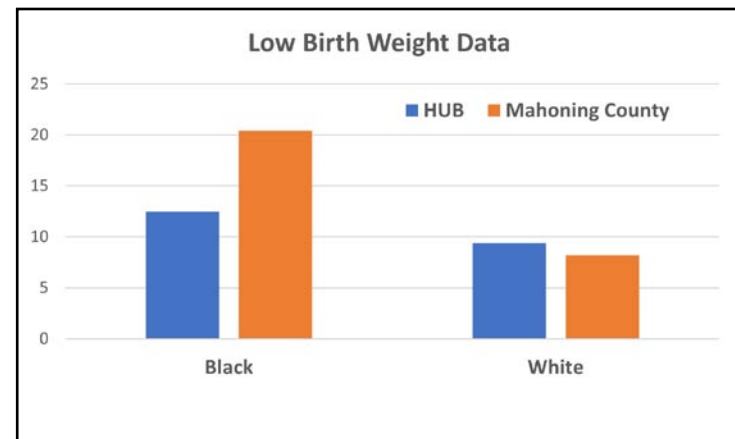

Changing the Community to a Healthier Life

In 2021, the Mahoning Valley Pathways HUB (the HUB) continued to serve our community to meet the health needs of our residents. The HUB partners with Akron Children's Hospital, Mercy Health, Alta Care Group, and MYCAP which employ specialized community health workers (CHWs) who connect those who are pregnant or have chronic diseases to supportive services and resources. Last year, the HUB enrolled 216 new clients to address their needs such as medical providers, food security, COVID-19 safety supplies, and housing. Thanks to the U.S. Department of the Treasury and the Board of Mahoning County Commissioners, the HUB partnered with the YWCA Mahoning Valley to administer an emergency rental assistance pilot project. With this project, the HUB had a goal of assisting 10 clients who were at risk of homelessness or facing housing instability. The HUB was able to surpass that goal and assist 17 women secure or remain in adequate housing. Due to this success, the project received additional funding to serve 8 more clients in 2022.

Furthermore, the HUB provided CHWs with continued education on COVID-19 and the vaccine, so they were fully prepared to answer questions from their clients. All clients received education on COVID-19 and the COVID-19 vaccines. One important role of the HUB is to provide training to CHWs to ensure they are prepared to serve their clients to the best of their ability. In 2021, the HUB provided CHWs virtual trainings on topics such as Motivational Interviewing and Adverse Childhood Events. Mahoning Valley Pathways HUB is honored to serve Mahoning County and looks forward to a successful 2022.

Mahoning County Tuberculosis Program Data

(data taken from monthly TB reports)

TB skin tests administered	477
Laboratory samples obtained (CBC, CMP, T-Spot)	107
New active TB cases	2
Active TB cases discharged from clinical care	1
Clients evaluated and started on treatment for Latent TB infection (LTBI)	15
LTBI cases discharged from clinical care	4
TB skin tests administered out of the office for community based testing	85

Project DAWN Program

Project DAWN (Deaths Avoided With Naloxone) is a drug overdose education and naloxone distribution program coordinated in Ohio by the Ohio Department of Health. Mahoning County Public Health's Project DAWN Program was first established in September 2015 with assistance from the Mahoning County Mental Health and Recovery Board. In 2019, the Ohio Department of Health offered program assistance under the Integrated Naloxone Access and Infrastructure Grant. Mahoning County Public Health applied for the funding assistance and has been awarded funds as a subgrantee since July 2019.

Naloxone is a medication that can block the effects of opioids on the brain and reverse an overdose by quickly restoring breathing when administered in time during an opioid overdose. Naloxone is safe and has no potential for abuse. If naloxone is given to a person who is not experiencing an opioid overdose, it is harmless. If naloxone is administered to a person who is dependent on opioids, it can produce withdrawal symptoms. Naloxone does not reverse overdoses that are caused by alcohol, cocaine, benzodiazepines, methamphetamine, or other non-opioid drugs.

Mahoning County Public Health's Project DAWN program distributed its highest number of naloxone take-home kits of 502 to the public/community members in 2021. For comparison, the program distributed 260 kits in 2020. Increased distribution was a direct result of staff collaborative efforts and non-traditional outreach events. Examples of outreach/distribution events our community health educator and public health nurses conducted during the year are as follows: COVID-19 vaccination clinics, Salvation Army food distribution, overdose awareness events with other agencies such as Ohio CAN, Spero Health, Brightview, YUMADAOP, Southern Park Mall, Youngstown State University, and several local private businesses. Public and community access to request a kit outside of special distribution events was streamlined into an easy to navigate survey on our website. MCPH continues to offer traditional access avenues of walk-in or phone call requests for the public.

Scan the code with your camera's phone to learn how to obtain a Project DAWN Kit.
