**Mahoning County
District Board of Health**

2015 ANNUAL REPORT

DISTRICT BOARD OF HEALTH MEMBERS

Lisa Noble Weiss, MD, M. Ed., FAAFP; Mike Heher, Alternate; Bev Fisher, Licensing Council Representative; Len Perry, MPH, RS, President; Margot Baird, RN, Vice President; and Don Somers, RS.

2015 DISTRICT ADVISORY COUNCIL

David Mannion, Chair
Jodi Kale, Secretary

2015 LICENSING COUNCIL MEMBERS

John Kotchmar retail food establishments
Tony Olin food service operations
Mike Heher solid waste disposal facilities
Tom Grantonic swimming pools and spas
Bev Fisher campgrounds

MCDBOH Medical Director

MCDBOH extends great thanks to John Venglarcik, III, MD, FAAP, FIDSA, for his five years of service as the Board's Medical Director and TB Control Officer. The Board also extends sincere appreciation to Lisa Noble Weiss, MD, M. Ed., FAAFP, for stepping up to serve as Interim Medical Director through much of 2015.

FROM THE HEALTH COMMISSIONER: PATRICIA MCGOVERN SWEENEY JD, MPH, RN

In 2014, more than 30 organizations that make up the Mahoning County Community Health Improvement Planning (CHIP) Team identified four major health priorities for the county:

1. Reduce infant mortality and eliminate birth outcome inequity
2. Improve rates of healthy eating and active living
3. Reduce the incidence and burden of chronic disease (particularly diabetes), and
4. Reduce rates of substance use disorders (particularly opiates and heroin)

At the same time, the team also identified strategies to improve these priorities and established goals that would demonstrate improved health. Over the past 18 months, organizations across the county have been working on implementing those strategies. The following table, on page 2, provides a snapshot of the community's "progress" toward achieving our collective goals. Please note: the Mahoning County CHIP is a 5-year plan. Very few goals are achievable in 18 months. The community is making progress in many areas, but in others, noted in red, data shows we have moved away from established goals. These need to be areas of focused community effort during 2016.

Respectfully,

Patricia McGovern Sweeney
Health Commissioner

2015 MAHONING COUNTY DISTRICT BOARD OF HEALTH STAFF

HEALTH COMMISSIONER

Patricia McGovern Sweeney, JD, MPH, RN

MAHONING COUNTY COMMUNITY HEALTH IMPROVEMENT PLAN 2015 REPORT CARD

KEY	Goal Met	Making Progress Toward Goal	Goal Not Met	Data Not Available to Date
-----	----------	-----------------------------	--------------	----------------------------

PRIORITY ONE: Healthy Eating/Active Living

GOAL: Increase the number of adults and children regularly engaged in healthy eating and active living.

	GOAL TARGET 2015	GOAL TARGET 2019
INDICATORS	- Adults Reporting Eating < 5 Servings of Fruits or Vegetables Per Day	- Adults Obesity
	- Adults Who are Physically Inactive - Breastfeeding Rates	
	- Minutes per week Children Active in School	- Overweight/Obesity Prevalence in 3 rd Graders

To accomplish this goal, the Mahoning County District Board of Health (MCDBOH) has been conducting Chronic Disease Self-Management classes, the YMCA of Youngstown has issued mini-grants to schools/organizations to facilitate changes in food, physical environment or physical activity policies, Akron Children's Hospital has developed a Healthy Kids Coalition which has been coordinating education programming in schools and in the community, and the United Way of Youngstown and the Mahoning Valley has implemented Success After 6, a multi-faceted afterschool program in the Youngstown Community School. Mercy Health's Stepping Out program collaborates with community centers to provide fitness activities, health assessment, and healthy eating education. Areas that need to be developed include the worksite wellness program, Work@Health, and educating area physicians on how to include information on healthy eating/active living screenings and information into their practice. Youngstown State University will assist with an assessment of the amount of time Mahoning County children spend in school based physical activity per week and a method to assess overweight/obesity prevalence in 3rd graders need to be developed.

PRIORITY TWO: Infant Mortality and Birth Outcome Inequity

GOAL: Infant mortality in Mahoning County will meet national goals and the disparity between black and white birth outcomes will be eliminated.

	GOAL TARGET 2015	GOAL TARGET 2017	GOAL TARGET 2019
INDICATORS	- Progesterone Education - Number of Fetal and Infant Mortality Review Recommendations	- <18 Month Inter-Conception Spacing - Births with First Trimester Prenatal Care	- Infant Mortality Rate per 1,000 Live Births for Deliveries Paid by Medicaid - Number of Deaths Due to Unsafe Sleep Environment
			- Preterm Births - Low Birth Weight - Low Education (HS diploma or less) Infant Mortality Rate/1,000 Live Births

The M/Y Baby's 1st Coalition is a community wide initiative to reduce infant mortality and eliminate birth outcome inequities in Mahoning County and Youngstown. With the MCDBOH and Youngstown City Health District as the leads, M/Y Baby's 1st Coalition is a partnership of more than 30 clinical, social, and behavioral health service providers that have analyzed the community's infant mortality data and are implementing interventions to address the risk factors leading to infant mortality in this community. Mercy Health has developed a CenteringPregnancy® program and Empowering Moms to provide social support, educational tools and community resources to pregnant and parenting women. MCDBOH, Mercy Health, and Akron Children's Hospital have been working together to conduct a safe sleep education campaign, including a Cribs for Kids program. Increasing progesterone use to lower the risk of preterm birth has been aggressively promoted by Akron Children's Hospital and a Fetal Infant Mortality Review (FIMR) program has been developed to analyze the systemic causes of infant deaths. Work to improve birth spacing and increase breastfeeding is also being conducted.

PRIORITY THREE: Chronic Disease

GOAL: Fewer residents of Mahoning County will be diagnosed with diabetes and those with diabetes currently will experience reduced morbidity.

	GOAL TARGET 2015	GOAL TARGET 2019
INDICATORS	- YMCA Diabetes Prevention Program Participants - YMCA Diabetes Prevention Program Evaluation - Tobacco Cessation Training - Mercy Primary Care Practices Meeting D5 Criteria	- Incidence of Diabetes Among Per 1,000 Adults
	- Mahoning County Primary Care Practices Meeting D5 Criteria	

Area hospitals and the YMCA of Youngstown have been working toward reducing the number of residents diagnosed with diabetes and reducing morbidity for those with diabetes currently. YMCA of Youngstown has been conducting the Diabetes Prevention Program and has obtained a grant to provide scholarships for participants unable to afford the program. Mercy Health primary care physicians have been educated on the D5 criteria in diabetic patients and their diabetic education program provides people with diabetes the opportunity to learn how to better control their blood sugar levels. MCDBOH and Mercy Health are conducting a number of tobacco cessation programs, including the "Baby and Me Tobacco Free" tobacco cessation program. Areas that need to be developed include conducting the Stanford University Diabetes Self-Management Program and the CDC Work@Health program for area businesses. Tobacco usage in 16-25 years olds needs to be addressed due to increases in usage rates.

PRIORITY FOUR: Substance Use Disorders (Heroin and Opiates)

GOAL: Decrease deaths from Substance Use Disorders.

	GOAL TARGET 2015	GOAL TARGET 2015	GOAL TARGET 2019
INDICATORS	- Naloxone Prescriptions	- BRAIN POWER NIDA Curriculum Adoption by School	- Students Reporting Opiate/Heroin Use
		- Newborns with Neonatal Abstinence Syndrome	- Drug Poisoning Death Rate (number of deaths)

Activities to educate the public on opiate use, abuse, and treatment opportunities are widespread throughout the community. Austintown, Sebring, South Range, and all Diocese of Youngstown Schools have adopted the evidence-based NIDA Brain Power curriculum that teaches the science of drug use and abuse in grades K-12. Boardman Schools have received a drug-free schools grant, Project DAWN (Deaths Avoided With Naloxone) has been implemented by MCDBOH. Local hospitals have implemented SBIRT in their clinics and practices. A Neonatal Abstinence Syndrome Task Force needs to be established.

For additional information about the Community Health Improvement Plan, see www.mahoninghealth.org.

NURSING AND COMMUNITY HEALTH DIVISION: M/Y BABY'S 1ST INFANT MORTALITY COALITION

Mahoning County is one of nine areas of the state that are experiencing extraordinarily high rates of infant mortality. To reduce infant mortality and eliminate birth outcome inequities, a community-wide coalition has been established in Mahoning County and Youngstown. The coalition, called M/Y Baby's 1st, is a partnership of more than 30 clinical, social, and behavioral health service providers that have analyzed the community's infant mortality trends. Local data demonstrates that our high infant mortality rates are because our babies are born too early and too little to survive and women in the following groups are most at risk:

- 12 years or less of education
- Limited social support (unmarried)
- Medicaid as insurer
- Inadequate birth spacing (<18 months between a birth and a subsequent pregnancy)
- African American

M/Y Baby's 1st is working in the community to implement the following to address identified risk factors:

- Progesterone education
- Safe Sleep and the Cribs for Kids program
- Birth spacing education and improving access to Long-Acting Reversible Contraception (LARC)
- Empowering Moms support groups
- CenteringPregnancy® Program
- Fetal and Infant Mortality Review (FIMR)
- Pathways HUB
- Everyday Democracy

For more information about M/Y Baby's 1st call 330-270-2855 ext. 137.

ANNUAL BIRTH DATA, MAHONING COUNTY

	2013	2014
Very Low Birth Weight (<1,500g)	39	48
Low Birth Weight (1,500-2,499g)	219	222
Normal Birth Weight (2,500-3,999g)	1,996	2,001
High Birth Weight (4,000g+)	130	139
Preterm Birth	343	330
Term Birth	2,042	2,080
<32 Weeks Gestation	58	59
32 to 36 Weeks Gestation	285	271
37 to 42 Weeks Gestation	1,976	2,012
42 Weeks+ Gestation	66	68
Total Number of Births	2,384	2,410

FETAL INFANT MORTALITY REVIEW

There is no foot too small that it cannot leave an imprint on this world.

Since 2000, the Mahoning County Child Fatality Review Board has analyzed the circumstances surrounding all childhood deaths in the county and made recommendations to reduce such tragedies in the future. During 2015, as a result of the M/Y Baby's 1st work with the Ohio Equity Institute, MCDBOH began a Fetal Infant Mortality Review (FIMR) program to examine fetal and infant deaths in Mahoning County. The FIMR process brings a multi-disciplinary community team together to review de-identified information about infant and fetal deaths (greater than 20 weeks gestation). The FIMR Team then makes recommendations to improve our service systems and resources for women, infants, and families.

PROJECT DAWN

2015 marked the beginning of MCDBOH participation in Project *DAWN*, (Deaths Avoided With Naloxone), an opioid overdose education and naloxone distribution program. Naloxone (also known as Narcan) is a life-saving drug that can reverse the effects of an opioid overdose. Individuals who know someone who is at risk for opioid overdose and individuals who are at-risk themselves are eligible to participate in the program. To receive a naloxone kit, program participants must learn how to recognize the signs of an opioid overdose, how to respond by calling 911 and giving rescue breaths, and how to administer naloxone as a nasal spray. Naloxone's only purpose is to reverse the effects of opioids in order to prevent death. Naloxone has no potential for abuse. To receive more information about Project *DAWN*, contact our Nursing and Community Health Division at 330-270-2855 ext. 125.

PATHWAYS HUB

In December of 2015, the MCDBOH was one of only 3 agencies in the state to receive grant funding from the Ohio Commission on Minority Health for the replication and implementation of a Pathways Community HUB. This is a coordinated-care model specifically

focused on improving infant mortality through the reduction of health and social disparities that affect at-risk pregnant women. This evidence-based model has been endorsed by several government agencies including the Center for Medicaid and Medicare Services and the Centers for Disease Control and Prevention. The Mahoning County Pathways HUB (The HUB) will be collaborating with three local care coordination agencies, Help Me Grow, Ohio Infant Mortality Reduction Initiative, and Mercy Health Resource Mothers to serve at least 50 women by June 2016. The HUB will also be participating in the Pathways Community HUB Certification Program in order to complete all requirements to become a nationally certified HUB by May 2016.

CRIBS FOR KIDS®

Every week three babies die in Ohio because they have been placed to sleep in an unsafe sleep environment. The Ohio Department of Health and the Mahoning County District Board of Health have collaborated

with Cribs for Kids to make Pack 'n Play® portable cribs and Safe Sleep Survival Kits available to families and caregivers that are unable to provide a safe sleep environment due to financial hardship. Each Survival Kit contains a fitted sheet for the Pack 'n Play®, a sleep sack for the infant, a bedtime storybook, and educational materials for the parents. To be eligible to receive a Pack 'n Play® portable crib, families must meet WIC income guidelines, must come to the Mahoning County District Board of Health office to pick up the Pack 'n Play®, and must participate in a safe sleep class. Additionally, the family must meet one of the following requirements to receive a Survival Kit: 1) Infant is less than one year old, and less than 30 lbs.; or 2) Mother is at least 32 weeks pregnant. During 2015, 167 Pack 'n Plays were distributed through this program. For additional information, contact our Nursing and Community Health Division.

DIABETES EMPOWERMENT EDUCATION PROGRAM

The MCDBOH is now offering the Diabetes Empowerment Education Program (DEEP) that addresses the health literacy and self-management needs of individuals with type 2 diabetes. The curriculum incorporates adult education and empowerment principles in six 2-hours sessions to be held in the community or in physicians' offices. It includes weekly action planning as well as visual and hands-on learning. For more information, contact our Nursing and Community Health Division at 330-270-2855 ext. 109.

WOMEN INFANTS AND CHILDREN SUPPLEMENTAL NUTRITION PROGRAM (WIC): THE OHIO WIC NUTRITION CARD

This year, the Ohio WIC program transitioned from paper coupons to the plastic Ohio WIC Nutrition Card (WNC). The WNC card, which is the size of a credit card, contains a security chip, and provides an electronic benefits transfer to purchase supplemental food and fruits and vegetables at authorized retail vendors. Mahoning County WIC program transitioned all 4,833 participants to the WNC between August and December of 2015.

The benefits for the WIC families and participants are:

- 1) At the completion of the WIC appointment – supplemental food benefits are issued and available on the same day – the families may walk out the door and make purchases from local vendors;
- 2) If the WNC is lost, stolen or misplaced, it can be replaced within six days, whereas paper food coupons were not replaceable;
- 3) WIC families/participants personal benefits are protected by a four digit pin number selected by the WIC parent/guardian or participant;
- 4) WNC looks like and works like any other debt or credit card at the checkout;
- 5) The list of foods WIC participants are authorized to purchase with the WNC can be scanned into the WIC participants, parent or guardian cellular phone; and
- 6) The WNC may be used in any of the 88 counties of the state of Ohio.

Food vendors support this transition also because the WNC provides reimbursements for purchases into an electronic bank account within two business days.

Alonda and her daughter Kennedy were the first in Mahoning County to receive their WIC Nutrition Card at the Boardman WIC office.

MAHONING COUNTY TUBERCULOSIS PROGRAM DATA 2015

Client contacts	3,621
TB skin tests administered	1,844
Laboratory samples obtained	40
Active TB cases	2
Active TB cases discharged from clinical care	0
Clients evaluated and started on LTBI* treatment	14
LTBI cases discharged from clinical care	9
Out of office visits, including skin tests and medication administration	92
*LTBI – Latent TB Infection	

MAHONING COUNTY TUBERCULOSIS CONTROL PROGRAM

For more than 22 years, the Mahoning County Tuberculosis (TB) Program has been administered by the Mahoning County District Board of Health. During 2015, MCDBOH thanked Dr. John Venglarcik for his years of excellent service to the TB program and welcomed Anthony Cutrona, MD, FACP to the role of Mahoning County TB Control Officer.

ENVIRONMENTAL HEALTH DIVISION: WORKING WITH THE COMMUNITY TO KEEP THE PUBLIC INFORMED

Following unusually heavy rains in June 2015, a fish kill was reported and confirmed in Lake Newport by the Ohio Department of Natural Resources. The Ohio EPA attributed the fish kill to the Combined Sewer Overflows (CSO) creating low dissolved oxygen levels within the Millcreek MetroParks (MCMP) Lake Newport. The MCDBOH performed initial E. coli testing which indicated elevated levels within the lake. As a result of that testing, MCMP then closed public access to all three lakes. MCDBOH and the MCMP conducted a 12 week water quality study for Lake Newport and the surrounding watershed. The study included weekly samples, from three predetermined locations on Lake Newport, as well as sampling 24-48 hours after a significant rain event. The testing was expanded throughout the watershed to include six additional locations in an attempt to locate or isolate potential sources for elevated E. coli levels.

At the conclusion of the study, the data collected demonstrated that CSO are one of many factors raising E. coli levels within Lake Newport. Other factors that may be contributing to the bacterial pollution includes; potentially failing septic systems, inadequate management of agricultural manure storage, improper application of manure to farm fields, wildlife, and domestic animal activity near creeks and streams.

The study also determined significant correlations with precipitation events and E. coli levels within the lake and other points throughout the Mill Creek Watershed. The final data provided information that shows E. coli levels beyond approved limits when sampled 24-48 hours after a significant rain event. The lake and sample points throughout the watershed would then return to safe levels after 24-48 hours of dry weather conditions. MCMP has now placed signage around the lakes to inform the public of potential risk.

Local agencies that have programs in place to protect our watershed must continue to provide education to the community. What we as individuals do upstream may have a negative or positive impact on the environment and the community downstream. Watershed protection is everyone's responsibility.

LEADING CAUSES OF DEATH, 2014

	Mahoning County	Ohio
Cause of Death	Number	Number
Heart Disease	823	16,981
Cancer	618	25,418
Chronic Lower Respiratory Disease	163	6,760
Stroke	152	5,787
Unintentional Injuries	135	6,177
Alzheimer's Disease	110	4,080

Ohio Department of Health, Bureau of Vital Statistics

ESCALATED ENFORCEMENT

In 2015, the Mahoning County District Board of Health Food Safety Program established a policy that defines progressive enforcement procedures and guidelines for sanitarians conducting food service operation and retail food establishment inspections.

This policy enables sanitarians to efficiently identify and document food code violations and when indicated, consistently apply standardized escalated enforcement procedures.

Maintaining a progressive enforcement program that includes education and training ensures that each Food Service Operator and Retail Food Establishment in Mahoning County is in compliance with the Ohio Uniform Food Safety Code.

HELP FOR FAILING HOUSEHOLD SEWAGE TREATMENT SYSTEMS

The Water Pollution Control Loan Fund (WPCLF) is a federal revolving loan fund designed to provide low interest rate loans for water resource protection and improvement projects. The fund offers financial assistance for eligible low-to-moderate income (LMI) residents who have a documented failing Household Sewage Treatment System (HSTS).

During the program years of 2011-2013, MCDBOH received nearly \$348,000 in funding that enabled the repair or replacement of 28 failing HSTS. During the program years of 2014-2015, a federal decision was made to not allocate financial assistance for HSTS repair or replacement. This caused significant hardship for many LMI homeowners with failing HSTS. In 2015, recognizing the importance of the program, local health departments and the Ohio Department of Health met with the Ohio EPA to request reinstatement of the funding.

For 2016, the Ohio EPA has allocated \$13.3 million for this program. MCDBOH successfully applied for the maximum allowable amount of \$300,000 for the 2016 installation year. MCDBOH projects that 20-23 HSTS will be able to be repaired or replaced with this funding. This benefits not only the LMI homeowner, but also the residents downstream who may be subject to the effects of the failing HSTS.

LABORATORY SERVICES:

A summary of lab services performed during 2015	
Environmental Laboratory Tests Conducted	24,683
Shale Testing	1
Lead Testing	3,464
Spore Tests from Tattoo Parlors	381
Microbiological Samples	4,383
Groundwater Monitoring Samples	232

The Laboratory's Quanti-Tray unit is used to analyze total coliform and E.coli for drinking and waste water. In 2015, the Quanti-Tray was used to analyze 240 E.coli samples for the Mill Creek Parkstudy.

THIS IS AN UNAUDITED FINANCIAL STATEMENT

The Mahoning County District Board of Health received funds from a number of new sources in 2015. The Community Foundation of the Mahoning Valley and the Western Reserve Health Foundation awarded MCDBOH a \$70,900 grant with a goal of reducing infant mortality in Mahoning County. The Ohio Department of Health provided \$9,871 in supplemental funding to improve local preparedness for the Ebola virus and other pathogens. The Environmental Health Division received \$5,000 from the U.S. Food and Drug Administration for Retail Food Protection Education and Training and Verification Audit Standards training. The Nursing Division received \$2,890 from the Swanston Foundation to provide community based education regarding the benefits of healthy eating and active living.
